ALARMS

QUICK AND EASY INSTALLATION

STANDARD ALARM

The Tank Alarm "TA1" provides a versatile means of indicating an alarm condition in a water or wastewater system. The unit has an amber "Power On" light to indicate it is in service and the unit will sense a high level condition or a low level condition (by just changing the floats). The alarm condition provides a red light and sound. The sound may be turned off until the alarm condition is corrected. The float switch is low voltage and U/L Listed.

The "Bracket/Cover" is a mounting bracket and cover only. All wiring and components are housed in the front insert module.

"FLOAT INCLUDED"

MODEL A1-A
NEMA1, INDOOR

MODEL A4-AFL
NEMA4X, OUTDOOR

AUTO RESET

The Auto Reset Alarm A1-A & A4-AF is a desirable option for many installations. In the event of a pump failure, water will continue to rise in the tank and sound the alarm. The buzzer can be silenced by pushing the silence switch. Once the alarm condition has been corrected and the alarm float turned down, the buzzer will automatically reset to make the system fully operational again. The repair person will not be able to forget to reset the audible portion of the alarm.

"FLOAT INCLUDED"

ITEM	DESCRIPTION
